MEMORANDUM FOR THE RECORD

SUBJECT: Floor Tile in Computer Room

1. The purpose of this note is to clarify the record re selection of the floor covering material for the new computer room (ground floor, G corridor).

2. The ADPS written requirement to OL for the computer site specified that a raised (false) floor was needed to house the electrical cables that interconnect the components of the system. ADPS orally requested a voice in selecting the color of the new floor covering.

3. [redacted] RECD/OL and [redacted] ADPS have coordinated all details pertaining to the preparations of the computer site.

[redacted] informed ADPS of the following decisions made by OL:

- a. [redacted] would install the raised floor.
- b. Even though vinyl tile was available, OL expected to have vinyl-asbestos tile installed because it was 25% to 30% cheaper.

4. [redacted] discussed the vinyl and vinyl-asbestos tiles with the salesman [redacted]. He recommended the vinyl-asbestos because it was harder. Even though the vinyl is glossier and does not require waxing it is soft and pliable--apt to be scarred easily by castors on machines, tape carts, etc., or high heel shoes.

5. ADPS asked the Agency's fine arts group to select the color (and pattern) of the floor tile. ADPS and OL concurred in their selection.
